

OUR SOLUTIONS AT A GLANCE

REAL-TIME COLLABORATION AND VIDEO COMMUNICATION

Set2Meet is a highly customizable scheduling and virtual meeting solution for e-learning, corporate training, online assessments and group collaboration. Competentum offers custom development of WebRTC-based application built exclusively for the needs of your organization and embedded into your web application natively to communicate right into your websites or apps.

ASSESSMENT AND GRADING

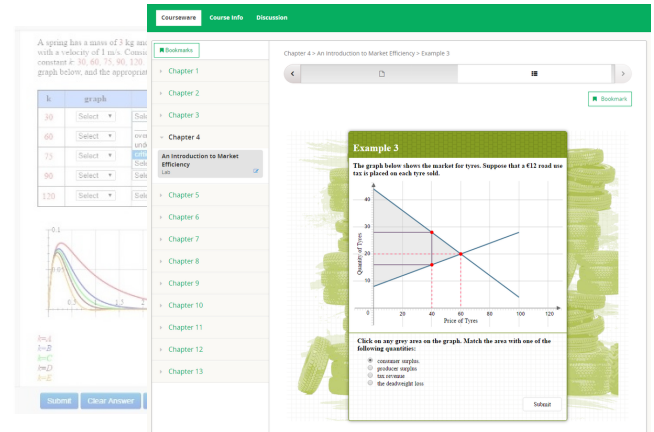

Algorithm-driven assessment brings you to a whole new level of efficiency in education and HR process. Computer-based grading in education saves instructor's time to concentrate on what really makes students learn better. We render dozens of problem types with automated grading, feedback and integrated reports for homework, self-study, tests, and exams embedded seamlessly into your system. Business applications support the entire workflow for staff assessments, interviews, and polls combined with intelligent analytics and reports to improve your HR practice and make the most value of it.

CONTENT CREATION AND MANAGEMENT SYSTEMS

Understanding content as a vital component of the learning process, we grew our expertise and a vast portfolio of content solutions, which includes robust content management systems, authoring and quality control tools, content migration and conversions, as well as content usage analytics and reporting. We built systems that can manage millions of content items and ensure only packaged quality content gets in front of you end user.

MOBILE APPLICATIONS FOR PLATFORMS

With the new generation of learners in mind, Competentum team builds great solutions not only for web but also for mobile. In addition to web view and adaptive design, we use technologies like React Native and Xamarin to provide mobile LMS experience with native interface and performance. Available on-the-go, user-friendly and engaging – our mobile apps for platforms instantly boost your LMS competitive value.

STAFF / TEACHER MANAGEMENT

We own a wide range of ready modules for the custom development of staff management systems in education and corporate environment. Our solutions provide the best value for teacher management, enterprise HRD systems, talent hiring, projects and task management, as well as EdTech ERP systems, including integration of the systems above into a cohesive business process and allowing reporting through BI (Business Intelligence).

LMS INTEGRATION AND CUSTOMIZATION

Whether it is a custom platform development tailored to your use case or customization of existing Learning Management System, we offer solutions for both. With the passion for technical detail, Competentum team provides the means to operate at great scale without compromise on quality or schedule. We have experience with all the major LMS systems on the market, both commercial (Canvas, Blackboard, D2L) and open-source (OpenEdx, Moodle).

ANALYTICS AND REPORTING

Seeing an immense value in collecting and analyzing data in business and education, Competentum offers software that can work with user performance and other activity data to produce powerful insights and predictions to improve your business and education processes.

VR/AR IN EDUCATION

VR/AR technology opens doors for new opportunities and content in education. Competentum has experienced team of Unity developers ready for your next generation ideas. From building virtual environments and objects to using computer vision features paired with machine learning for video and audio streams – we use this technology for highly customized recognition and realistic behavior in real-time collaboration and virtual learning.
